

## **Part Drawing Checklist**

A comprehensive part drawing review checklist so you can streamline your drawing review process, catch preventable mistakes, and move faster with confidence. Interested in how to catch more issues on drawings before they go to manufacturing? Check out Five Flute.

	Drawing preparation, title block and sheet structure
	<ul> <li>Check PDF export quality - be sure PDF matches native CAD drawing</li> <li>Drawing title</li> <li>Drawing number and/or part number</li> <li>Company information</li> </ul>
	Company specific boilerplate callouts and general specifications
	Part information  Material  Estimated part weight
	Finishing information
	<ul> <li>Drawing interpretation information such as</li> <li>☐ Measurement units of the drawing (in, mm, cm, etc)</li> <li>☐ Default tolerances for dimension callouts where no tolerance is specified</li> <li>☐ References to relevant drawing standards such as ASME Y14.5</li> </ul>
	Personnel information  Created by (drafter or engineer)  Checked by Approved by
Q.	Views and geometry communication
	<ul> <li>Include enough views to communicate critical geometry fully</li> <li>Ensure views are scaled appropriately to maximize drawing space</li> <li>Inclusion of isometric view (in full color)</li> <li>Appropriate sections and detailed views for hidden and intricate features</li> </ul>
	Appropriate use of center marks, center lines, hidden lines, & break lines
P. P	Dimensions and tolerances
	<ul> <li>Check for dimensioning of all critical features with inspection in mind</li> <li>Legible dimensioning scheme with no overlapping leaders</li> <li>Inclusion of reference dimensions for quick stock sizing</li> <li>Review hole and thread callouts for appropriate depth and fit specifications</li> <li>No dimensioning hidden lines</li> </ul>
	GD&T
	<ul> <li>☐ Check if datum structure is consistent with part functionality</li> <li>☐ Review each feature control frame for design intent</li> </ul>
	Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout)  For first articles (FAI)  For statistical process control (SPC)  Include measurement location and preferred measurement method callouts
	Notes, annotations and revisions  Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations
	<ul> <li>Include drawing notes to represent design intent not captured via dimensioning, tolerancing,</li> </ul>
	<ul> <li>Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations</li> <li>For drawings that accompany a 3D file</li> </ul>
	<ul> <li>☐ Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations</li> <li>For drawings that accompany a 3D file</li> <li>☐ Ensure 2D is clearly linked to 3D (typically with drawing note)</li> <li>Ensure current revision is called out properly</li> <li>☐ Update revision section in title block</li> <li>☐ Include updated revision table with summary of changes</li> <li>☐ Use revision cloud to highlight subtle feature changes</li> <li>☐ Update notes to indicate the latest CAD file associated with revision</li> <li>☐ Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC</li> </ul>
	<ul> <li>□ Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations</li> <li>For drawings that accompany a 3D file</li> <li>□ Ensure 2D is clearly linked to 3D (typically with drawing note)</li> <li>Ensure current revision is called out properly</li> <li>□ Update revision section in title block</li> <li>□ Include updated revision table with summary of changes</li> <li>□ Use revision cloud to highlight subtle feature changes</li> <li>□ Update notes to indicate the latest CAD file associated with revision</li> <li>□ Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC</li> <li>Functional interfaces</li> </ul>
	<ul> <li>☐ Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations</li> <li>For drawings that accompany a 3D file</li> <li>☐ Ensure 2D is clearly linked to 3D (typically with drawing note)</li> <li>Ensure current revision is called out properly</li> <li>☐ Update revision section in title block</li> <li>☐ Include updated revision table with summary of changes</li> <li>☐ Use revision cloud to highlight subtle feature changes</li> <li>☐ Update notes to indicate the latest CAD file associated with revision</li> <li>☐ Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC</li> </ul>
	□ Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file □ Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly □ Update revision section in title block □ Include updated revision table with summary of changes □ Use revision cloud to highlight subtle feature changes □ Update notes to indicate the latest CAD file associated with revision □ Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces  Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout) □ Include relevant 'Where used' information □ Review dimensioning and tolerancing of critical interfaces with other componentse.g hole
	<ul> <li>Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations</li> <li>For drawings that accompany a 3D file</li> <li>Ensure 2D is clearly linked to 3D (typically with drawing note)</li> <li>Ensure current revision is called out properly</li> <li>Update revision section in title block</li> <li>Include updated revision table with summary of changes</li> <li>Use revision cloud to highlight subtle feature changes</li> <li>Update notes to indicate the latest CAD file associated with revision</li> <li>Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC</li> <li>Functional interfaces</li> <li>Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout)</li> <li>Include relevant 'Where used' information</li> <li>Review dimensioning and tolerancing of critical interfaces with other componentse.g hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?</li> </ul>
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly Update revision section in title block Include updated revision table with summary of changes Use revision cloud to highlight subtle feature changes Update notes to indicate the latest CAD file associated with revision Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces  Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout) Include relevant 'Where used' information Review dimensioning and tolerancing of critical interfaces with other componentse.g hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?  Build your own DFM checklist (examples below)
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly Update revision section in title block Include updated revision table with summary of changes Use revision cloud to highlight subtle feature changes Update notes to indicate the latest CAD file associated with revision Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces  Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout) Include relevant "Where used" information Review dimensioning and tolerancing of critical interfaces with other componentse.g hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?  Build your own DFM checklist (examples below) Include manufacturing process specific notes  CNC machining Tool access check: internal corners, fillet radii, undercuts Machine-ability: wall thickness, flexible features Fixture-ability: parallel surfaces, softjaw compatability, etc  Sheet metal
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly   Update revision section in title block   Include updated revision table with summary of changes   Use revision cloud to highlight subtle feature changes   Update notes to indicate the latest CAD file associated with revision   Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces  Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout)   Include relevant "Where used" information   Review dimensioning and tolerancing of critical interfaces with other componentse.g hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?  Build your own DFM checklist (examples below)   Include manufacturing process specific notes  CNC machining   Tool access check: internal corners, fillet radii, undercuts   Machine-ability: wall thickness, flexible features   Fixture-ability: parallel surfaces, softjaw compatability, etc
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly   Update revision section in title block   Include updated revision table with summary of changes   Use revision cloud to highlight subtle feature changes   Update notes to indicate the latest CAD file associated with revision   Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces  Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout)   Include relevant 'Where used' information   Review dimensioning and tolerancing of critical interfaces with other componentse.g hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?  Build your own DFM checklist (examples below)   Include manufacturing process specific notes  CNC machining   Tool access check: internal corners, fillet radii, undercuts   Machine-ability: wall thickness, flexible features   Fixture-ability: parallel surfaces, softjaw compatability, etc  Sheet metal   Include flat pattern
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations   For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)   Ensure current revision is called out properly   Update revision section in title block   Include updated revision table with summary of changes   Use revision cloud to highlight subtle feature changes   Update notes to indicate the latest CAD file associated with revision   Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations   For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly   Update revision section in title block   Include updated revision table with summary of changes   Use revision cloud to highlight subtle feature changes   Update notes to indicate the latest CAD file associated with revision   Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces  Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout)   Include relevant 'Where used' information   Review dimensioning and tolerancing of critical interfaces with other components - e.g. hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?  Build your own DFM checklist (examples below)   Include manufacturing process specific notes  CNC machining   Tool access check: internal corners, fillet radii, undercuts   Machine-ability: wall thickness, flexible features   Fixture-ability: parallel surfaces, softjaw compatability, etc  Sheet metal   Include flat pattern   Check minimum bend radius   Include flat pattern   Check minimum bend radius   Inclusion of bend relief   Check for hole distance near bends (2X thickness clearance preferred)  Injection molding   Draft angle and undercuts check
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations   For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly   Update revision section in title block   Include updated revision table with summary of changes   Use revision cloud to highlight subtle feature changes   Update notes to indicate the latest CAD file associated with revision   Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces   Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout)   Include relevant "Where used" information   Review dimensioning and tolerancing of critical interfaces with other componentse.g hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?  Build your own DFM checklist (examples below)   Include manufacturing process specific notes  CNC machining   Tool access check: internal corners, fillet radii, undercuts   Machine-ability: wall thickness, flexible features   Fixture-ability: parallel surfaces, softjaw compatability, etc  Sheet metal   Include flat pattern   Check minimum bend radius   Inclusion of bend relief   Check for hole distance near bends (2X thickness clearance preferred)   Injection molding   Draft angle and undercuts check   Wall thickness uniformity check   Include radii for mold flow (eliminate sharp corners)   Include bosses and rib supports where necessary
	Include drawing notes to represent design intent not captured via dimensioning, tolerancing, and other annotations  For drawings that accompany a 3D file   Ensure 2D is clearly linked to 3D (typically with drawing note)  Ensure current revision is called out properly   Update revision section in title block   Include updated revision table with summary of changes   Use revision cloud to highlight subtle feature changes   Update notes to indicate the latest CAD file associated with revision   Check for visual differences across drawing versions - using a tool like Five Flute or adobe DC  Functional interfaces  Note inspection dimensions (inspection bubbles or ASME Y14.5 inspection callout)   Include relevant 'Where used' information   Review dimensioning and tolerancing of critical interfaces with other components - e.g hole pattern on part A, hole pattern on part B, do tolerances make sense for assembly?  Build your own DFM checklist (examples below)   Include manufacturing process specific notes  CNC machining   Tool access check: internal corners, fillet radii, undercuts   Machine-ability: wall thickness, flexible features   Fixture-ability: parallel surfaces, softjaw compatability, etc.  Sheet metal   Include flat pattern   Check minimum bend radius   Inclusion of bend relief   Check for hole distance near bends (2X thickness clearance preferred)   Injection molding   Draft angle and undercuts check   Wall thickness uniformity check   Include radii for mold flow (eliminate sharp corners)   Include bosses and rib supports where necessary   Specify cosmetic requirements
